GENERAL INDORMATION:
GENERAL INDORMATION:
APPLICANT: Jean-Philippe Girard
APPLICANT: Francois Amalric
APPLICANT: Francois Amalric
APPLICANT: Francois Amalric
APPLICANT: Thomas Clouaire
APPLICANT: Thomas Clouaire
TITLE OF INVENTION: THAP PROTEINS AS NUCLEAR RECEPTORS FOR
TITLE OF INVENTION: TRAP PROTEINS AND ROLES IN TRANSCRIPTIONAL REGULATION, CELL
ITLE OF INVENTION: PROLIFERATION AND CELL DIFFERENTIATION
FILE REFERENCE: BIOBANK: 012A
CURRENT APPLICATION NUMBER: 05/10/733,878
CURRENT FILING DATE: 2003-12-10
PRIOR FILING DATE: 2002-12-10
PRIOR APPLICATION NUMBER: 66/485027
PRIOR FILING DATE: 2003-07-03
NUMBER OF SEQ ID NOS: 535
SOF ID NO 425
LENGTH: 665
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               265

This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate aspents that are capable of modulating the activity of target proteins having motor of modulating the activity of target proteins having motor or phosphate. Purthermore, this activity or indirectly produces ADP fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          human; enzyme; motor domain; kinesin-like DNA binding protein; KID; cytostatic; cardiant; immunomodulator; antiinflammatory; gene therapy; concer; hyperplasia; restenosis; cellular proliferation disorder; cardiac hypertrophy; immune disorder; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying a candidate agent as modulator of function of a target protein for treating cellular proliferation disorders by adding a candidate agent to a mixture of the target protein that directly/indirectly produces ADP or phosphate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human kinesin-like DNA binding protein (KID) (SeqID 8).
                                                                                                                                                                                                                                                                                                                                                                                              ALIGNMENTS

Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. The polypeptide sequence is human KID protein (SeqID 8) of the invention.

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein, or act as a modulator of the binding characteristics or protein, and methods of treating cellular proliferation disorders such as protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restences, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with Kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular confileration disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and for inhibiting CC associated with KID and contain motor protein cC and contains and contains and contains and contains and contains and contains and contains and contains and contains and contains and contains and contains and contains and contains and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated microtubule motor protein, useful for screening modulators for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1LIPGLSQKPISSFADFERHFLPASRNRTVGATRLNQRSSRSHAVLLVKVDQRERLAPFR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP for phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 4) of the invention.

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or protein or act as a modulator of the binding characteristics or concert, hyperplasias, restenosis, cardiac hypertrophy, immune disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders screening for modulators of motor proteins useful for treating cellular confidention for modulators of motor proteins useful for treating cellular confidention disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating autoimmune diseases, arthritis, graft rejection, inflammatory bowel disease and diseases, arthritis, graft rejection, inflammatory bowel disease and angioplasty. This sequence represents a human microtubule motor protein of the invention. Note: The specification states that this sequence is concern by the nucleic acid featured as SEQ ID NO:3, but this does not Claim 1; SEQ ID NO 4; 26pp; English appear to be the case. &\$38888888888888888888888888888888

Example 47; SEQ ID NO 425; 612pp; English.

The present invention describes a method for modulating the expression of a thanacos (death)-associated protein (THAP) responsive gene. The method completes modulating the interaction of a THAP-family polypeptide or its biological fragment with a nucleic acid, and so enhancing or repressing the expression of the THAP responsive gene. Also described: (1) a method of modulating the expression of a gene responsive to a THAP responsive complex; (2) a pharmaceutical carrier; (3) a transcription factor decoy complex; (2) a pharmaceutical carrier; (3) a transcription factor decoy consisting a transcription factor decoy described above; (5) methods of modulating the interaction between a nucleic acid and a THAP-family of DIYPeptide or its bloidgical fragment, or a nucleic acid and a THAP-family polypeptide or its bloidgical fragment, or a nucleic acid and a THAP-family polypeptide or its biological fragment, or a nucleic acid encoding a THAP-family polypeptide or its biological fragment; (6) a vector packaging cell line comprising a viral vector which comprises a promoter operably linke conclusion of constructing a cell which expresses creament; (7) a method of constructing a cell which expresses creament; (7) a method of constructing a cell which expresses creament; (7) a method of constructing a cell which expresses creament; (7) a method of constructing a cell which expresses creament; (8) are those of identifying a test compound that modulates transcription a creament or that modulates the transport of a THAP-family polypeptide from accessive or insufficient approsis, cardiovascular disease and neurodegenerative corpusing a test compound that modulates transcription associated with a condition associated with a c

The invention elates to novel isolated, enriched or purified mucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a complement of (a); (c) hybridizes under stringent conditions to (a) and condoss a naturally occurring kinase polypeptide; (d) encodes the conformal domain, a cerept that it lacks one or more, but not all, of an CV terminal domain, a coiled-coil structure region, a spacer region and a CV terminal domain, a coiled-coil structure region, a spacer region and a CV terminal tail; or (e) is a complement of (d). The nucleic acid molecules, polypeptides, methods and substance are useful for treating cancers, immune-related diseases or disorders, cardiovascular disease, brain or curronal-associated diseases, and metabolic disorders. The disorders are CV preferably cancers of the tissues or of hemacopoietic origin, diseases of the central or peripheral nervous system, Alzheimer's disease, corrections caused by fungi, ocular disease, migraines, pain, bacteria, infections caused by fungi, ocular diseases, migraines, pain, coviral infections caused by fungi, ocular diseases, migraines, pain, coviral infections in whypertension, psychotic disorders, neurological disorders, dyskinesias, metabolic disorders and organ transplant corresponds to one of the kinase polypeptides of the criefficion. This sequence corresponds to one of the kinase polypeptides of

The prostate cancer antigens can have neuroprotective, cytostatic, cardioactrive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome polynucleotides may be used for detection of prostate cancer, chromosome disorders such as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present

                     This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces to phosphate. Furthermore, this activity can be determined using method fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a farmonomodulators and antinflammatories. Accordingly, through gene thermappy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 6) of the invention.

cacids encoding them. The invention also relates to a method of screening acids encoding them. The invention which has microtubule stimulated ATPase activity, a method of testing for ATPase activity of microtubule motor proteins, method of catidity candidate agents that bind to a target protein, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating callular proliferation disorders such as and inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for proliferation disorders such as cancer, hyperplasias, restenosis, cardiac proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating autoimmune disorders and inflammation, for treating autoimmune diseases, arthritis, graft rejection, inflammatory bowel disease and proliferation induced after medical procedures including surgery and anglophasty. This sequence represents a human microtubule motor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    QREGKLYLIDLAGSEDNRRTGNKGLRLKESGAINTSLFVLGKVVDALNQGLPRVPYRDSK 300

```
The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening cor modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or protein or activity of a target protein, modulators of the target protein, and methods of treating callular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with kinesin-like DNA correction of sorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders such as cancer, hyperplasias, restenosis, cardiac proliferation disorders of motor proteins useful for treating cellular corrections of sorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating autoimmune diseases, arthritis, graft rejection, inflammatory bowel disease and corrections and protein surgery and candioplasty. This sequence represents a human microtubule motor protein cof the invention. Note: The specification states that this sequence is concerned by the nucleic acid featured as SEQ ID NO:1, but this does not
Human; microtubule motor protein; cellular proliferation disorder; cancer; hyperplasia; restenosis; cardiac hypertrophy; immune disorder; inflammation; kinesin-like DNA binding protein; KID; autoimmune disease; arthritis; graft rejection; inflammatory bowel disease; angioplasty.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated microtubule motor protein, useful for screening modulators for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation.

                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using or phosphate. Furthermore readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antinfinammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 2) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    265

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL36175) and the encoded proteins (ABB57737-

human kinase protein #33

Novel

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                  12;

The invention elates to novel isolated, enriched or purified nucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a comprises a naturally occurring kinase polypeptide; (b) is a complement of (a); (c) hybridizes under stringent conditions to (a) and condess a naturally occurring kinase polypeptide; (d) encodes the conditions to (a) and conjugatide; (d) encodes the conditions to (a) and conjugatide; (d) encodes the conditions of the cerminal domain, c-terminal catalytic domain, a C. terminal tail; or (e) is a complement of (d). The nucleic acid molecules, terminal tail; or (e) is a complement of (d). The nucleic acid molecules, polypeptides, methods and substance are useful for treating cancers, immune-related diseases and metabolic disorders. The disorders are neuronal-associated diseases, and metabolic disorders are for eneuronal-associated diseases, and metabolic disorders and iseases of the tissues or of hematopoietic origin, diseases of the central or peripheral nervous system, Alzheimer's diseases, conditions or viral infections caused by Fiungi, ocular diseases, migraines, pain, carceria, infections caused by Fiungi, ocular diseases, migraines, pain, diseases, dispendents, infections caused by Fungi, ocular diseases, migraines, pain, disorders, dyskinesias, metabolic disorders, neurological disorders, dyskinesias, metabolic disorders and organ transplant crejections rejections crejections or of the kinase polypeptides of the rejections or or the kinase polypeptides of the rejections or or the conference of the kinase polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   70 YGERSTQODIYAGSVQPILRHLLEGONASVLAYGPTGAGKTHTMLGS-----PEQP--GV 122

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and ECOR V sites of the pCMVSPORT 6 vector. Library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1020
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1099

181 strand conscope.cns.fr)
182 strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pcMvSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                      CCCCTGAGAGACGCTTCTACCTAGACACAGTCTCCGCACTCAACTTTGCTGCCAGGTCCA 1098

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
